#### I. Introduction

The Massachusetts Division of Health Care Finance and Policy began collecting Outpatient Observation Data in July 1997. The Division's collection of Outpatient Observation Data was in response to increasing migration of hospital care to the outpatient observation setting from the tradition inpatient setting. Outpatient Observation patients are observed, evaluated, and treated, if necessary, before they are safely discharged from the hospital.

The Outpatient Observation Data includes patients who receive outpatient observation services and are not admitted to the hospital. Outpatient Observation services is defined generally for reporting purposes in the Case Mix Regulation 114.1 CMR 17.02 as:

Observation services are those furnished on a hospital's premises which are reasonable and necessary to further evaluate the patient's condition and provide treatment to determine the need for possible admission to the hospital. These services include the use of a bed and periodic monitoring by a hospital's physician, nursing, and other staff.

This manual includes information to be used with the Outpatient Observation case mix data as specified in 114.1 CMR 17.08, Outpatient Observation Data Specifications. Information contained in this manual includes the data file specifications, standards the Division is using for checking the data, hospital verification responses concerning hospital reported data, and file structure descriptions. Also included in information on cautionary use data and calculated fields.

#### Regulations:

Copies of Regulation 114.1 CMR 17.00: Requirement for the Submission of Hospital Case Mix and Charge Data and Regulation 114.1 CMR 2.00: Disclosure of Hospital Case Mix and Charge Data may be obtained for a fee by faxing a request to the Division at (617) 727-7662. The Regulations also may be found at the Division's web site: <a href="http://www.mass.gov/dhcfp">http://www.mass.gov/dhcfp</a>.

## II. Compact Disk (CD) File Specification

#### 1) Data Formats:

The Division has created the outpatient observation data set in three available formats:

- .DBF
- .MDB
- TXT.

#### 2) File / Table Names:

OA03L#Q1 OA03L#Q2 OA03L#Q3 OA03L#Q4

Where '#' stands for the level of data requested.

#### 3) 2003 Outpatient Observation Record Counts:

For Hospital Year 2003 the number of outpatient observation stays collected from Massachusetts hospitals for Quarters 1-4 totaled 128,825. The distribution by quarter is as follows:

| Quarter 1 | 32,558 | (N = 73  Hospitals Reporting) |
|-----------|--------|-------------------------------|
| Quarter 2 | 31,663 | (N = 73  Hospitals Reporting) |
| Quarter 3 | 32,646 | (N = 73  Hospitals Reporting) |
| Ouarter 4 | 31.958 | (N = 73 Hospitals Reporting)  |

#### 4) Data Formats:

For a complete listing of data base structure formats (.DBF, .MDB, and .TXT), please refer to the Appendices at the back of this manual.

#### III. Data Standards

# <u>Definition of Quarterly Reporting Periods</u>

All Massachusetts acute care hospitals are required to file data which describes the case mix of their patients as well as the charges for services provided to their patients in accordance with Regulation 114.1 CMR 17.00. Hospitals report data to the Division on a quarterly basis. For the 2003 period, these quarterly reporting intervals were as follows:

Quarter 1: October 1, 2002 – December 31, 2002

Quarter 2: January 1, 2003 – March 31, 2003

Quarter 3: April 1, 2003 – June 30, 2003

Quarter 4: July 1, 2003 – September 30, 2003

#### III. Data Standards

## **Data Edits and Error Categories**

Fiscal Year 2003 outpatient observation data was submitted by the hospitals 75 days after the close of each quarter. The required data elements were then edited using the corresponding edits as specified in *Regulation 114.1 CMR 17.08: Outpatient Observation Data Specifications*.

The quarterly data is edited for compliance with regulatory requirements using a one percent error rate as specified in Regulation 114.1 CMR 17.08. The one percent error rate is based on the presence of type A and type B errors as follows:

Type A: One error per outpatient observation stays causes rejection of discharge.

Type B: Two errors per outpatient observation stay causes rejection of discharge.

If one percent or more of the discharges are rejected, then the entire data submission is rejected by the Division, and the hospital is informed that the submission failed the edit process. These edits primarily check for valid codes, correct formatting, and the presence of required data elements. Please see listing of data elements categorized by error type which follows this section.

Each hospital receives a quarterly error report displaying invalid outpatient observation stay information. Quarterly data which does not meet the one percent compliance standard must be resubmitted by the individual hospital until the standard is met.

The Division strives to include data that has passed the one percent compliance standard in the data files we release to the public. When this is not possible, we include data which did not meet the 1% standard (i.e. failed the edits). Submissions which have failed are referred to as **Cautionary Submissions**. Observation stays within submissions that have failed the edit process are assigned a special flag which indicates that the submission failed.

Please see the Cautionary Use Data section for further technical details.

# **Data Element Field Descriptions and Error Categories**

The following are the required data elements that hospitals must report to the Division in accordance with the Case Mix Regulation 114.1 CMR 17.00. We have also included additional fields created by the Division. *Newly added last year* was an *ED indicator* that went into effect October 1, 2001. The flag indicates whether the patient was admitted to the outpatient observation stay from the hospital's emergency department.

Each recipient of the outpatient observation data has been granted approval by the Division to receive a certain level of data. Please refer to Section III for a description of Data Levels I – VI, and to Section VII, Appendix D to review the specific data elements contained in your data files. Please note that higher levels contain an increasing number of Deniable Data Elements.

In addition to the field names, the data description and error category for each field is listed below:

|    | Field Name: | <b>Short Description:</b>   | Error Category: |
|----|-------------|---|-----------------|
| 1  | Hos_ID      | Hospital DPH number   | A               |

## Outpatient Observation Data Codes

The following are the data codes for the required data elements that hospitals must report to the Division in accordance with Case Mix Regulation 114.1 CMR 17.00. We have also included data codes for the additional fields created by the Division. Each recipient for outpatient observation data has been granted approval by the Division to receive a certain level of data. Please refer to Section III for a description of Data Levels I – VI and to Section VII, Appendix D to review the specific data elements contained in your data files. Please note that the higher levels contain an increasing number of Deniable Data Elements.

#### III. Data Standards

### Description of Data Levels I - VI

Six Fiscal Year 2003 data levels have been created to correspond to the levels in *Regulation 114.5 CMR 2.00; "Disclosure of Hospital Case Mix and Charge Data*". Higher levels contain an increasing number of the data elements defined as "Deniable Data Elements" in Regulation 114.5 CMR 2.00. The deniable data elements include: the Unique Health Identification Number (UHIN, which is the encrypted patient social security number), the patient medical record number, hospital billing number, Mother's UHIN, date of birth, beginning and ending dates of service, the Unique Physician Number (UPN, which is the encrypted Massachusetts Board of Registration in Medicine License Number), and procedure dates.

The six levels include:

| LEVEL I | Contains all case mix data elements, except the deniable data |
|---------|---|
|         | elements  |

**LEVEL III** Contains all Level I data elements, plus the patient UHIN, the mother's UHIN, an observation sequence number for each UHIN observation record, and may include the number of days between each subsequent observation stay for each UHIN number.

**LEVEL IV** Contains all Level I data elements, plus the patient UHIN, the mother's UHIN, the UPN, an observation sequence number for each UHIN observation record, and may include the number of days between each subsequent observation stay for each UHIN number.

**LEVEL V** Contains all Level IV data elements, plus the patient's beginning service date, and ending service date and procedure dates.

**LEVEL VI** Contains all of the deniable data elements.

#### **IV. Data Verification Process**

The year-end Outpatient Observation Data verification process is intended to present the hospitals with a profile of their individual data as retained by the Division. The purpose of this project is to function as a quality control measure for hospitals to review the data they have provided to the Division of Health Care Finance and Policy.

Hospitals have an opportunity to review their data each year. The Division produces a Profile Report for the hospital to review that contains a series of frequency distribution tables covering selected data elements. Examples of these tables include number of observation patients by month, average hours of service, charge summary, and the top diagnoses and procedures. A complete listing of all tables is shown below.

# **Profile Report Distribution Tables**

#### **IV. Data Verification Process**

After reviewing each Profile Report, hospitals are asked to file a response form which provides the Division with verification that the report has been reviewed. The **Profile Report Response Form** provides each hospital with two alternatives for their reply:

Hospital Agrees (also known as an "A" response): By checking this category, a hospital indicates its agreement that the data appearing on the Profile Report is accurate and that it represents the hospital's outpatient observation patient profile.

Hospital Discrepancies Noted (also known as a "B" response): By checking this category, a hospital indicates that the data on the report is accurate except for discrepancies noted.

If any discrepancies exist (i.e. a "B" response), the Division requests that hospitals provide a written explanation of the discrepancies, which will be included in this Outpatient Observation Documentation manual. A listing of the Profile Report Error Categories is shown below:

# Profile Report Error Categories:

The discrepancy categories which hospitals may report on the Profile Report Verification Response form are as follows:

| Patients by Month                          | Other Primary<br>Caregivers | Diagnoses        |
|--|-----------------------------|------------------|
| Hours of Service                           | Departure Status            | Procedures       |
| Charge Summary                             | Age                         | Primary Payors   |
| Observation Type Distribution              | Sex                         | Secondary Payors |
| Originating Referring /<br>Transfer Source | Race                        | CPT Codes        |
| Secondary Referring /<br>Transfer Source   | Zip Codes                   |                  |

Hospitals are strongly encouraged by the Division to review their Profile Report for inaccuracies and make necessary corrections so that subsequent quarters of data will be accurate.

#### **SAINT VINCENT HOSPITAL**

Saint Vincent Hospital reported one major discrepancy in the area of CPT Codes.

Top Ten CPT4 codes show 27% without a CPT4 code. The absence of a code does not seem reasonable and the explanation has not been verified yet but the current theory is that there are multiple codes supplied per record and the slot that the top ten are reported off of may prove to be missing perhaps due to alignment of the record.

#### **IV. Data Verification Process**

## **INDIVIDUAL HOSPITAL DISCREPANCY DOCUMENTATION**

#### **SALEM HOSPITAL**

Salem Hospital reported one minor discrepancy in the area Patients by Month. The discrepancy was due to the fact that Patient Accounting changed some Inpatient visits to Outpatient Observation visits, after certain payers denied the inpatient claims. The changes/revisions occurred well after the period was reported.

#### **IV. Data Verification Process**

#### **INDIVIDUAL HOSPITAL DISCREPANCY DOCUMENTATION**

#### **UNION HOSPITAL**

Union Hospital reported one minor discrepancy in the area Patients by Month. The discrepancy was due to the fact that Patient Accounting changed some Inpatient visits to Outpatient Observation visits, after certain payers denied the inpatient claims. The changes/revisions occurred well after the period was reported.

#### V. Cautionary Use Data

The Outpatient Observation data files contain the most recent active data from each hospital. Active data includes submissions from hospitals that have "passed" the Division's edits, and also includes submissions that have "failed". Failing the edit process would mean that 1% or more of the observation stays did not pass the edit process. We consider data that did not pass the edit process to be "cautionary use" data.

We have included on each file a field called SubmissionPassed. This field serves as a flag and indicates whether the quarterly submission passed or failed the edit process.

If a submission passed the edit process, the SubmissionPassed field for all observation stays within that submission are assigned a value of -1.

If a submission failed the edit process, the SubmissionPassed field for all observation stays within that submission are assigned a value of 0.

### V. Cautionary Use Data

## Hospitals with Cautionary Use Data for FY2003

## D. Hospitals that Do Not See Outpatient Observation Patients

| Hospital Name                       | Comments                           |
|-------------------------------------|------------------------------------|
| Berkshire Health – Hillcrest Campus | Does not see observation patients. |
| Cambridge Health Alliance – Malden  | Does not see observation patients. |
| Caritas Norcap Lodge                | Does not see observation patients. |
| Kindred – Boston                    | Does not see observation patients. |
| Kindred – North Shore               | Does not see observation patients. |

#### VII. Calculated Fields

#### Age Calculation

#### **Brief Description**:

AgeOfPatient is calculated using the DateDiff Function in Access, which subtracts the date of birth (DOB) from the End\_Date. Age is calculated to the nearest year (the remainder is dropped) if patient is at least 1 year old. The AgeUnits field is assigned a value of 'YEARS'. Age is calculated to the nearest week (the remainder is dropped) if a patient is less than 1 year old. The AgeUnits field is assigned a value of 'WEEKS'.

If the observation did not pass the edits for any reason the age is not calculated and the AgeOfPatient field is set to zero and the AgeUnits field is left blank.

#### **Detailed Description**:

- 1. If the observation passed the edits then the DateDiff function is used to determine the age in weeks of the patient by subtracting the Date of Birth from the End of Service Date.
- 2. If the age in weeks is greater than 51 then the DateDiff function is used to determine the age in years of the patient by subtracting the Date of Birth from the End of Service Date and the AgeUnits is set to "Years".
- 3. If the age in weeks is less than or equal to 51 then the DateDiff function is used to determine the age in weeks of the patient by subtracting the Date of Birth from the End of Service Date and the AgeUnits is set to "Weeks".
- 4. If the observation did not pass the edits then the AgeOfPatient is set to zero and the AgeUnits field is left blank.

#### VII. Calculated Fields

#### Observation Sequence Number Calculation

#### **Brief Description**:

The file is sorted by PT\_ID (Unique Patient ID also known as the UHIN) and End Date. The Observation Sequence Number (ObsSeqNo) is then calculated by incrementing a counter for each of the PT\_ID's observation stays.

If the observation did not pass the edits for any reason the Observation Sequence Number is not calculated and the ObsSeqNo field is set to zero.

#### **Detailed Description**:

- 1. The file is sorted by PT\_ID (Unique Patient ID also known as the UHIN) and End Date.
- 2. The sequence number is calculated by incrementing a counter from 1 to nnn, where a sequence number of 1 indicates the first observation stay for a PT\_ID and nnn indicates the last observation stay for the PT\_ID.
- 3. If the observation did not pass the edits then the ObsSeqNo is set to zero.

#### VII. Calculated Fields

#### Number of Days Between Observation Stays Calculation

#### **Brief Description**:

The file is sorted by PT\_ID (Unique Patient ID also known as the UHIN) and End Date. For PT\_IDs with 2 or more observation stays the Number of Days Between Observation Stays (NoofDaysBtwObs) is calculated using the DateDiff Function in Access which subtracts the previous observation end date from the current End Date.

If the observation did not pass the edits for any reason the Number of Days Between Observation Stays is not calculated and the Noof DaysBtwObs field is set to zero.

#### **Detailed Description**:

- 1. The file is sorted by PT\_ID (Unique Patient ID also known as the UHIN) and End\_Date.
- 2. If this is the first occurrence of a PT\_ID the Number of Days Between Observation Stays is set to zero.
- 3. If a second occurrence of a PT\_ID is found then the Number of Days Between Observation Stays (NoofDaysBtwObs) is calculated by using the DateDiff Function in Access, which subtracts the previous observation end date from the current End Date.
- 4. Step 3 is repeated for all subsequent observation stays until the PT ID changes.
- 5. If the observation did not pass the edits then the NoofDaysBtwObs is set to zero.
